

# Liquid ring vacuum pumps

two stage

## LPH 65320, LPH 65327

**Pressure range:** 33 to 1013 mbar  
**Suction volume flow:** 300 to 700 m<sup>3</sup>/h

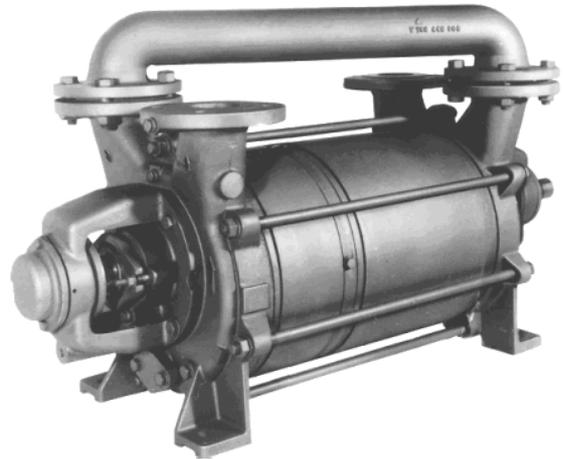

### CONSTRUCTION TYPE

Sterling SIHI liquid ring vacuum pumps are displacement pumps of uncomplicated and robust construction with the following particular features:

- handling of nearly all gasses and vapours
- non polluting due to a nearly isothermal compression
- oil-free, as no lubrication in the working chamber
- small quantities of entrained liquid can be handled
- easy maintenance and reliable operation
- low noise and nearly free from vibration
- wide choice of material, therefore applicable nearly anywhere
- protection against cavitation as standard
- incorporated dirt drain
- no metallic contact of the rotating parts

The Sterling SIHI liquid ring vacuum pumps LPH 65320 and LPH 65327 are two stage pumps.

The pumps LPH 65320 and LPH 65327 can be applied without modification as compressors (see catalogue part K).

### APPLICATION

Handling and exhausting of dry and humid gases; entrained liquid can be handled during normal duty. The pumps are applied in all fields where a pressure of 33...900 mbar must be created by robust vacuum pumps.

Fields of application are for example:

- chemistry and pharmacy for distilling and degassing,
- electric industry for impregnation and drying
- plastics industry for degassing etc.

### NOTE

During the operation the pump must continuously be supplied with service liquid, normally water, in order to eliminate the heat resulting from the gas compression and to replenish the liquid ring, because part of the liquid is leaving the pump together with the gas. This liquid can be separated from the gas in a liquid separator (see catalogue part accessories).

It is possible to reuse the service liquid. The pumps are with a device by which the contaminated service liquid can be drained during operation (dirt drain), if necessary.

The direction of the rotation is clockwise, when looking from the drive on the pump.

### GENERAL TECHNICAL DATA

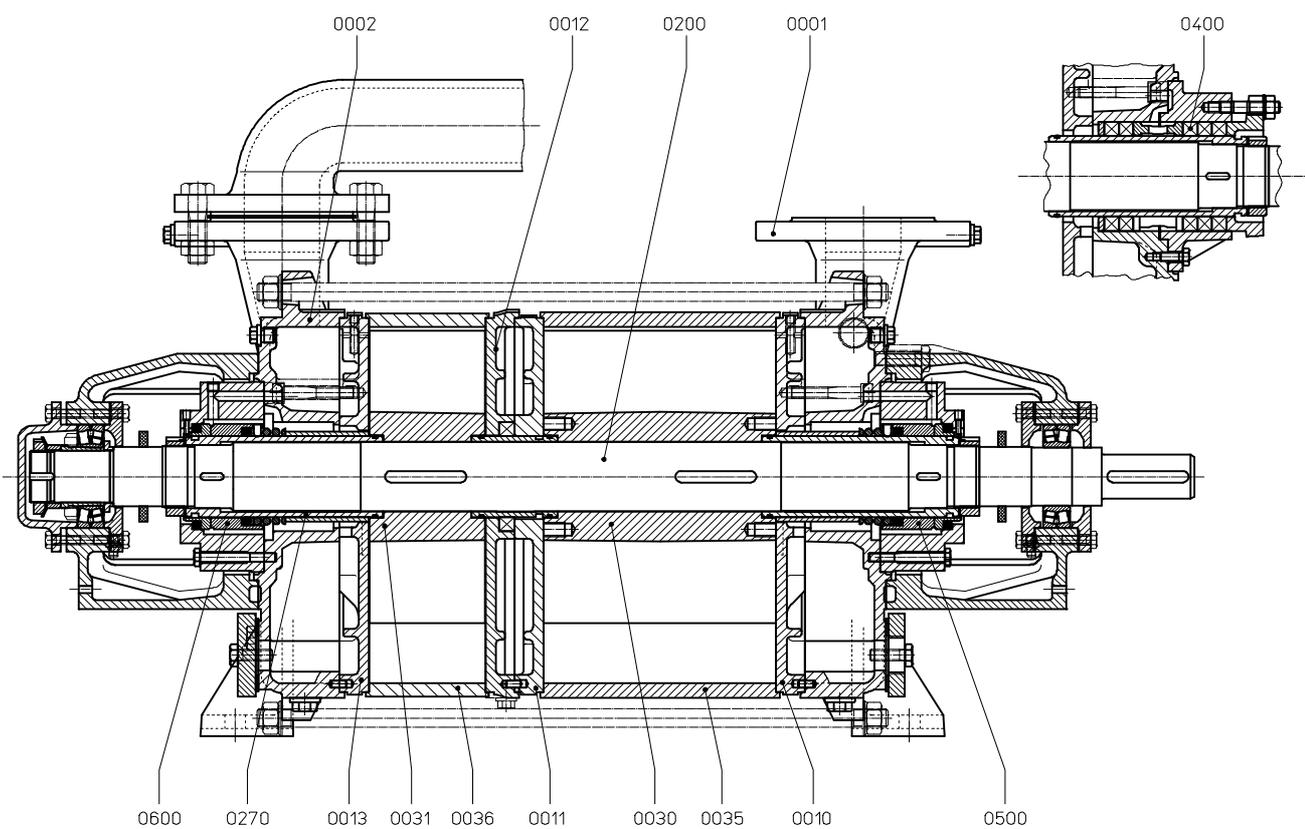

pump type		unit	LPH 65320			LPH 65327			
Speed (normal speed 1450)	50 Hz 60 Hz	rpm	1150	1450	1740	1150	1450	1740	
Max. compression over pressure		bar				2			
Max. admissible difference		bar	1,8	1,6	1,5		1,6	1,5	1,5
in case of belt drive								1,1	
Hydraulic test (over pressure)		bar				3			
Moment of inertial of the rotating pump parts and of the water filling		kg · m <sup>2</sup>	0,32				0,38		
Sound pressure level at a suction of 80 mbar		dB (A)	75	76	79		75	76	79
Min. pulley diameter in case of V-belt drive		mm				160			
max. gas temperature	dry	°C				200			
	saturated	°C				100			
Service liquid									
max. admissible temperature		°C					80		
max. viscosity		mm <sup>2</sup> /s					90		
max. density		kg/m <sup>3</sup>					1200		
volume up to shaft		liter	16					19	
Max. flow resistance of the heat exchanger		bar				0,2			

The combination of several limiting values is not admissible.

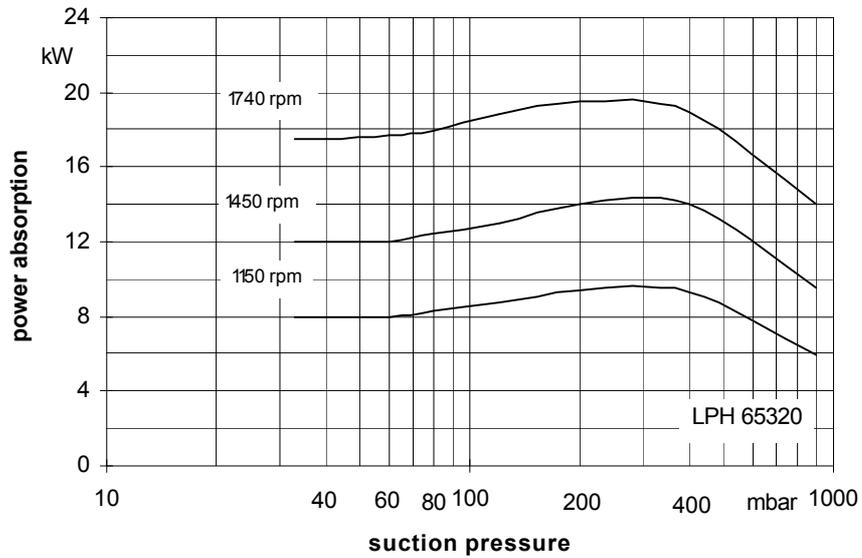

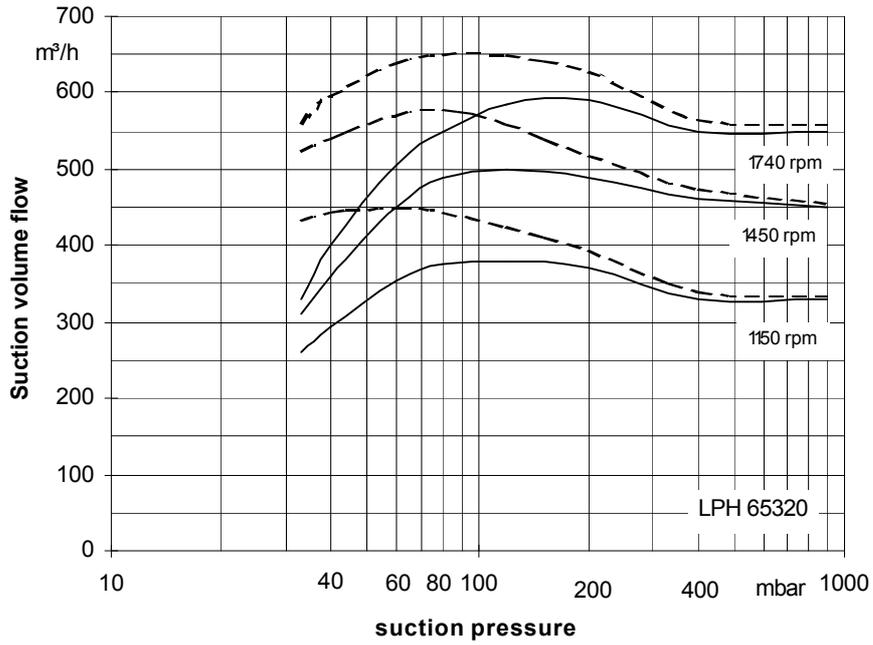

## Material design

Item	COMPONENTS	MATERIAL DESIGN	
		02	42
0001, 0002	Casing	0.6025	1.4408
0010, 0011, 0012, 0013	Guide disk	0.6025	1.4408

## Sectional drawing LPH 65320, LPH 65327

## Suction volume flow and power absorption LPH 65320

The operating data are applicable under the following conditions:

- pumping medium:
  - dry air: 20°C \_\_\_\_\_
  - water vapour saturated air: 20°C - - - - -
- service liquid:
  - water: 15°C

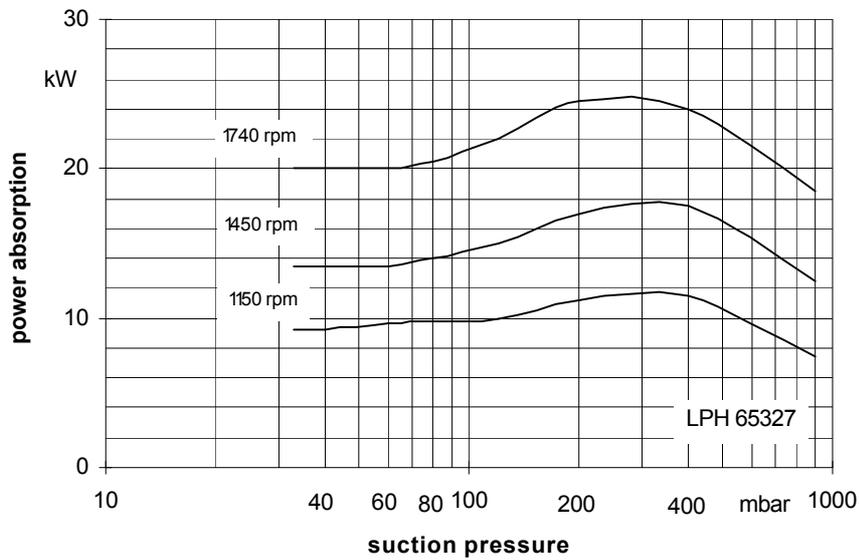

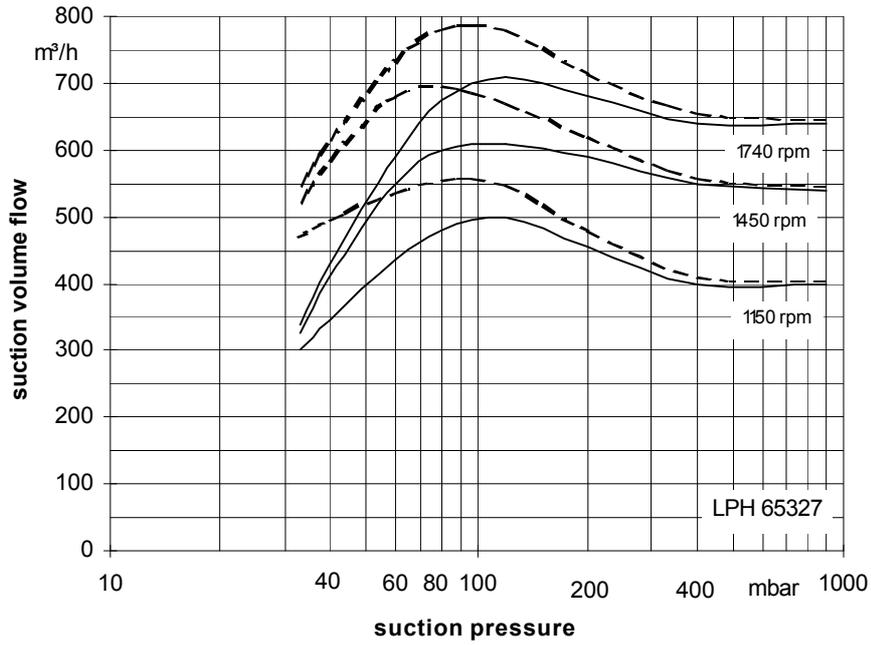

Compression pressure 1013 mbar (atmospheric pressure)

The suction volume flow is applied to the suction pressure

Tolerance of the operating data 10%

Max. fresh water need with lowest suction pressure

## Suction volume flow and power absorption LPH 65327

The operating data are applicable under the following conditions:

- pumping medium:
  - dry air: 20°C \_\_\_\_\_
  - water vapour saturated air: 20°C - - - - -
- service liquid:
  - water: 15°C

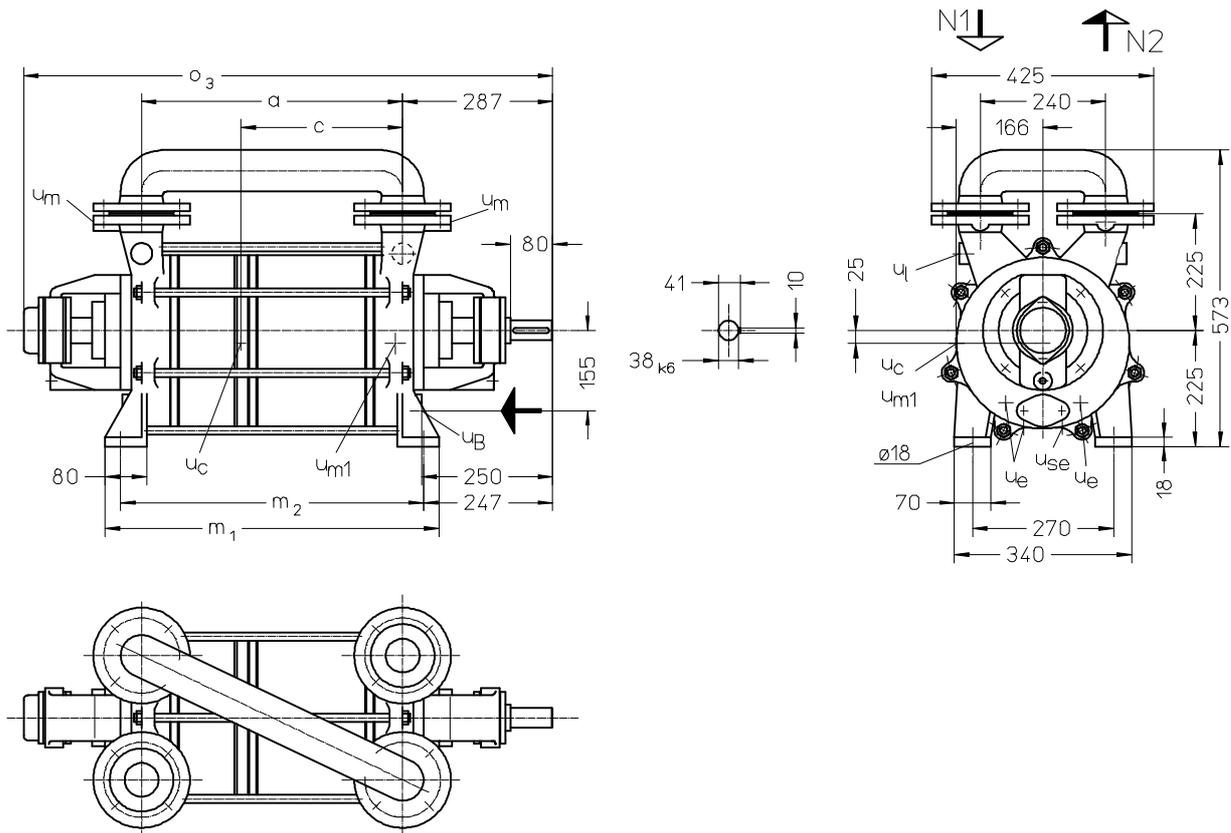

Compression pressure 1013 mbar (atmospheric pressure)

The suction volume flow is applied to the suction pressure

Tolerance of the operating data 10%

Max. fresh water need with lowest suction pressure
